Professional Summary Information Technology student and Junior Developer with hands-on experience using Python, React, and JavaScript to build responsive web pages, automation tools, and computer-vision applications. Skilled in developing practical software solutions, learning new technologies, and applying analytical thinking to technical challenges, with a strong interest in full-stack development and testing.

Skills Python, HTML, CSS, JavaScript, Lua, AutoHotKey, React, TypeScript, SQL, PostgreSQL, Automated Testing, End-to-End, Browser Testing, Database, FastAPI, AWS

PROJECTS

Message Center Web App May 2026

- Developed a responsive web for a local massage center.
- Applied component-based design to meet client-specific requirements.

Tab Management Automation Tool 2024

- Built a script to automate copying browser links into a Notepad file and closing tabs, solving a personal workflow problem and improving efficiency.

Posture Alarm Prototype May 2026

- Developed an application that monitors shoulder and head position using a webcam and emits an alert when poor posture is detected.

Book & Writing Web App Jun 2025 - Present

- Developed a full-stack book and writing web app from scratch, managing the entire software development lifecycle (SDLC).
